Deposit-Age Summary

# PREPARING THE DATA

- Check for null and duplicate values and drop Irrelevant columns
- Turned Categorical Variables into Dummy Variables and Numerical Binary Variables
- 50:50 split of dataset into training and test set

# ALGORITHM ANALYSIS: ACCURACY

- Logistic Regression : 0.7968, True Positive Rate: 79.74, True Negative Ratio: 79.62
- Random Forest : 0.8420, True Positive Rate: 87.39, True Negative Ratio: 81.19.
- Ada Boosting : 0.8104, True Positive Rate: 78.93, True Negative Ratio: 83.03.

# Feature importances of Random Forest

# Feature importances of ADA Boosting

# CONCLUSION

- Focus on Ages < 30 and Ages > 50.
- Put emphasis on segments of clients who do not have regular employment and higher secondary level of education.
- Target group with duration of contact around the average line.

Months

# CONCLUSION
